### THE BEACON FOR GREEN BUILDING AND DESIGN

Since its inception, the U.S. Green Building Council (USGBC) has been the beacon for green building and design. It is the lifeblood behind the LEED® (Leadership in Energy and Environmental Design) building certification program, which quickly set the stage for today's best practices in green building. And, like the green movement itself, it has experienced rapid and sustained growth.

The present demand for LEED certification for building projects is so high that the USGBC has expanded significantly in recent years to accommodate its growth. After just two years at its Dupont Circle headquarters in Washington, D.C., the USGBC outgrew its office space. But true to its mission, the sixteen-year-old non-profit embraced the opportunity to renovate a circa 1970s office building—and to become the first project to achieve LEED platinum under the newest version of its green building rating system.

The redesign was a formidable task: gut two floors and create a collaborative office space that is also a showpiece for sustainable design, science and technology. The new office tripled the square footage of the previous location, adding an additional floor and nearly 75,000 square feet of functional space. “Every year, thousands of visitors, from government officials and tourists to manufacturers and schoolchildren, tour the facility to see how the latest green products and technology are working to create buildings that are better for occupants, the environment and the bottom line,” said Ana Ka’ahanui, Manager, USGBC Headquarters Education & Events. The statistics tell an impressive story. When compared to a traditional office space, the new headquarters uses up to 50% less energy and 40% less water. Plus, 95% of office waste is diverted from the landfill.

### GREEN PRODUCTS THAT GET THE MESSAGE OUT

During the design and construction phase, the USGBC and architecture firm Envision Design worked closely with green product manufacturers to specify products that made significant contributions to LEED criteria, while meeting the classic aesthetic of the new space. Excel Dryer, Inc., manufacturer of the high-speed, energy-efficient XLERATOR Hand Dryer, has been a corporate member of the USGBC for nearly seven years and the XLERATOR has been a featured green product at USGBC headquarters. “Restroom fixture technology has evolved significantly in the last ten years,” said Envision Design principal, Ken Wilson. “XLERATOR continues to be the specified hand dryer choice at USGBC headquarters because it meets the aggressive energy and waste reduction objectives for designing state-of-the-art green restrooms.” Wilson specified XLERATOR XL-SB-1.1N stainless steel hand dryer, “In architecture, performance and design are inextricably linked,” added Wilson. “The XLERATOR Hand Dryer delivers both.”

## › PROBLEM

Renovate 1970s office building to LEED platinum status

## › SOLUTION

XLERATOR Hand Dryers

## › RESULTS

Meets aggressive energy and waste reduction objectives. New headquarters uses up to 50% less energy than traditional office space.

The XLERATOR is the only hand dryer in the industry with a dry time of 8 seconds\* — tested to guidelines from the Global Hand Dryer PCR published by UL Environment — and it uses 80% less energy than conventional hand dryers. It represents a 95% cost savings when compared to paper towels, eliminating their labor, maintenance and waste.

A peer reviewed (ISO 14040 standards) Life Cycle Assessment of XLERATOR confirmed it reduces the carbon footprint of hand drying by 50-75% compared to both traditional hand dryers and even 100% recycled paper towels. It is the first hand dryer to be BuildingGreen Approved® and helps facilities qualify for several LEED® v4 Credits and Green Globes to satisfy corporate and government sustainability goals.

## A VIRTUAL ADDRESS

XLERATOR is also featured on the Material Wall at the USGBC's Learning Pathway, a corridor dedicated to showcasing each material or product used in the facility, its origin, and utility. "This was an opportunity for us to create a living lab, where people can come and see the range of green building products that are available — and how to marry modern architecture with green design," added Ka'ahanui.

With this education-driven philosophy in mind, the USGBC recently embarked on the development of a virtual tour of its new headquarters. Working with Igloo Studios, a digital media firm that specializes in immersive 3D and video media, the building was modeled in 3D from CAD drawings and photographs using Google SketchUp. The resulting presentation is a 3D model with embedded videos, audio podcasts, 3D models of building products and materials, and text. "The interactive site will be used as a platform to tell a story about the space and create an infrastructure of green education," said Ka'ahanui.

Excel Dryer and Sloan Valve, a manufacturer of water-efficient solutions for the plumbing industry, teamed up to provide a restroom course featured in the virtual tour. The AIA/CSI/GBCI CEU course emphasizes how high-speed, energy-efficiency hand dryers and plumbing fixtures can help reduce maintenance and cost while delivering the lowest environmental impact. "The course provides architects and specifiers with an overview of the newest technologies in high-efficiency plumbing products and fixtures for state-of-the-art green restroom design," said William Gagnon, vice president of marketing and key accounts, Excel Dryer, Inc. The high-speed energy-efficient hand dryer manufacturer features a number of AIA/CEU endorsed courses on its web site.

The green movement shows no signs of slowing. The USGBC and its more than 16,000 member companies are well poised to guide the next generation of builders, architects, specifiers, teachers and environmentalists in creating a sustainable future through cost-effective and energy-efficient buildings.

*\*Dry time and energy use testing performed by SGS International on standard XLERATOR Hand Dryer with 0.8" nozzle to 0.25g or less of residual moisture, pursuant to the UL Environment Global Product Category Rules (PCR) for Hand Dryers.*

**"XLERATOR continues to be the specified hand dryer choice at USGBC headquarters because it meets the aggressive energy and waste reduction objectives for designing state-of-the-art green restrooms."**
