

FENWAY HAS A NEW GREEN MONSTER

“As stewards of such a storied venue we recognize our unique position and ability to raise public consciousness about important issues. Our decision to enhance the ballpark’s environmental attributes is one born out of a sense of personal responsibility and professional duty ... For us, this announcement marks some of the first steps in an ongoing process to make America’s most beloved and oldest ballpark also one of America’s greenest.”

Boston Red Sox Chairman**

The XLERATOR® Hits A Grand Slam For The Boston Red Sox

In 2008, the Red Sox launched the Fenway Greening initiative with the Natural Resources Defense Council (NRDC), an internationally renowned environmental group. The goal was to implement eco-friendly practices and technologies to bring America’s oldest ballpark to the forefront of sustainability.

Over the past five years, Fenway Greening renovations include solar thermal panels that are now used to heat one-third of the water used at the park, recycling and composting efforts initiated by culinary staff and energy-efficient LED lighting. Starting with the 2013 championship season, the Fenway Greening initiative took a bold step forward when 100 high-speed, energy-efficient **XLERATOR** Hand Dryers were installed in restrooms throughout the park.

THE STATS – COST AND ENVIRONMENTAL SAVINGS

“Sustainability is a passion of mine,” said Chris Knight, Red Sox Manager of Facility Planning and Services. “The combination of finance and environmental responsibility requires pushing the envelope to find optimum levels of efficiency, which is why we sought out thought leaders like Excel Dryer who are innovating new ways to help us in our greening initiatives.”

Over 37,000 fans and 2,000 staff members are on hand for sold-out home games. And while Red Sox Nation fills the stands, they also fill up the trashcans with dirty paper towels. Fenway was spending nearly \$57,000 each year on paper towels, not including the cost of maintenance and waste removal.

The **XLERATOR** represents a 95% cost savings over paper towels, reduces the need for their labor and maintenance and eliminates their waste while improving restroom hygiene. Unlike several paper towel dispensers, **XLERATOR** hand dryers operate with motion sensors that are touch-free and help prevent the spread of germs. The **XLERATOR** also dries hands three times faster (10 seconds*) and uses 80% less energy than conventional hand dryers.

“The installation of **XLERATOR** hand dryers was a significant factor in reducing our overall waste removal from the park by over 123 tons this year, which equates to a 24% reduction in waste compared to the same time last year ... Our first season with **XLERATOR** hand dryers installed in Fenway’s restrooms isn’t even over yet, but the annual savings compared to paper towels is clearly substantial.”

– **Chris Knight,**
*Red Sox Manager,
Facility Planning and Services*

“Fenway Greening is our unique facility management plan to adopt the most sustainable and environmentally friendly technologies like **XLERATOR** ... It’s all about identifying areas for improvement and executing solutions with the best green products the industry has to offer. The environmental savings **XLERATOR** provides Fenway Park was enough to make the switch away from paper and the cost-savings is ‘icing on the cake.’”

– **Jon Lister**,
Fenway Director
of Facilities Management

“The restrooms are less congested now because we used to have a problem with clogged toilets and urinals due to improper disposal of paper towels ... Now that paper towels have been eliminated from the restrooms, plumbing problems are almost non-existent.”

– **Roy Contreras**,
Senior Custodial Manager
for Aramark

A customized cost-savings analysis revealed that **XLERATOR** hand dryers reduced Fenway Park’s hand drying carbon footprint by 82%. To put that into perspective, an 82% reduction saved approximately 560 trees, 100 cubic meters in landfill space, 657,724 gallons of water and emissions from almost 620 gallons of gasoline in one year.

XLERATOR hand dryers will save the park over \$83,000 annually – a 97% savings over paper towels. And they will see a full return on their investment in just over 12 months, including installation costs.

FACILITY MAINTENANCE MADE EASIER

In addition to the financial and environmental benefits, the facility maintenance staff boasts that **XLERATOR** has streamlined workflow and dramatically improved the fan experience.

Aramark, a global leader in facilities management and professional services, handles all concessions and maintenance at Fenway Park. The **XLERATOR** is making their job a lot easier.

“**XLERATOR** provides a tremendous amount of savings compared to paper towels,” said Roy Contreras, Senior Custodial Manager for Aramark. “The staff says that before the high-speed, energy-efficient hand dryers were installed, a busy game day was like a tornado hit the park. We are very appreciative for how much **XLERATOR** dryers are helping us do a better job and keep Fenway clean. I can’t imagine the place without them anymore.”

Before the **XLERATOR** hand dryers were installed, Fenway’s restrooms required an average of six to eight trash receptacles. Today, each of the park’s restrooms has a single trash receptacle. That means facility staff can focus on more important things than keeping up with the maintenance needs created by paper towels.

“We were able to trim down the amount of time it takes to prep and clean the park, but also the amount of people it takes to keep Fenway clean and hygienic,” said Contreras.

IMPROVING THE FAN EXPERIENCE

One area that has seen a vast improvement is staff response to spills – a common occurrence at a packed ballpark that can lead to slips and falls. In years past, it took an average of three to five minutes for a facility employee to arrive at the scene of a spill. Now it’s down to 30–90 seconds.

Thanks to the **XLERATOR** hand dryers, staff can now spend more time positively impacting the fan experience. The fans are happy. "Sometimes it's good not to hear anything from the fans... from a facility maintenance perspective. That means they are enjoying the game and things are working as they should," added Knight.

In addition to faster response time for slips and falls, maintenance staff is helping fans find their seats and finding time for formerly neglected tasks such as removing graffiti. Fenway is learning to do more with less, saving money not just on waste removal but also on labor.

CUSTOMIZE YOUR OWN XLERATOR SOLUTION

XLERATOR is now available with a full line of accessories, including our new HEPA Filtration System with a washable metal mesh pre-filter for reliable performance and a longer life span, speed and sound control options, antimicrobial wall guard and the XCHANGER paper towel dispenser retrofit kit. The **XLERATOR** is MADE IN USA Certified®, the first hand dryer to be GreenSpec® Listed and helps facilities qualify for LEED® credits. **XLERATOR** helps commercial facilities save time, money and the environment.

“The iconic left field wall is not the only ‘green monster’ at Fenway anymore ... The XLERATOR high-speed, energy-efficient hand dryer is a figurative green monster that is helping the Red Sox achieve their environmentally sustainable goals through Fenway Greening while also contributing to other main objectives; reducing costs, labor and maintenance while improving the parks appearance and fan experience.”
